

When **recharge.com** grew everybody was really excited...

- recharge.com is a fast-growing company
- Scaling all over the world
- Rapidly expanding all their teams
- Adding multiple payment solutions globally
- Migrating to an ERP system

It's fun to work at recharge.com!

But the complex tech stack together with
the rapid growth

give the

Accounting, Finance & Control

departments

A LOT of challenges

What we saw

The consequences

What we saw

The consequences

Complex and disconnected
Tech Stack with
high transaction volumes

What we saw

The consequences

Complex and disconnected
Tech Stack with
high transaction volumes

Repetitive, error-prone manual work

What we saw	The consequences 
Complex and disconnected Tech Stack with high transaction volumes	Repetitive, error-prone manual work
Invoices not recorded on individual levels	

What we saw	The consequences 
Complex and disconnected Tech Stack with high transaction volumes	Repetitive, error-prone manual work
Invoices not recorded on individual levels	Painful month-end and year-end closes with tedious audits

What we saw	The consequences 
Complex and disconnected Tech Stack with high transaction volumes	Repetitive, error-prone manual work
Invoices not recorded on individual levels	Painful month-end and year-end closes with tedious audits
Backend system with no matching logic	

What we saw	The consequences 
Complex and disconnected Tech Stack with high transaction volumes	Repetitive, error-prone manual work
Invoices not recorded on individual levels	Painful month-end and year-end closes with tedious audits
Backend system with no matching logic	Inability to continuously reconcile order-payment-accounting data

What we saw	The consequences 
Complex and disconnected Tech Stack with high transaction volumes	Repetitive, error-prone manual work
Invoices not recorded on individual levels	Painful month-end and year-end closes with tedious audits
Backend system with no matching logic	Inability to continuously reconcile order-payment-accounting data
Multiple disconnected PSPs	

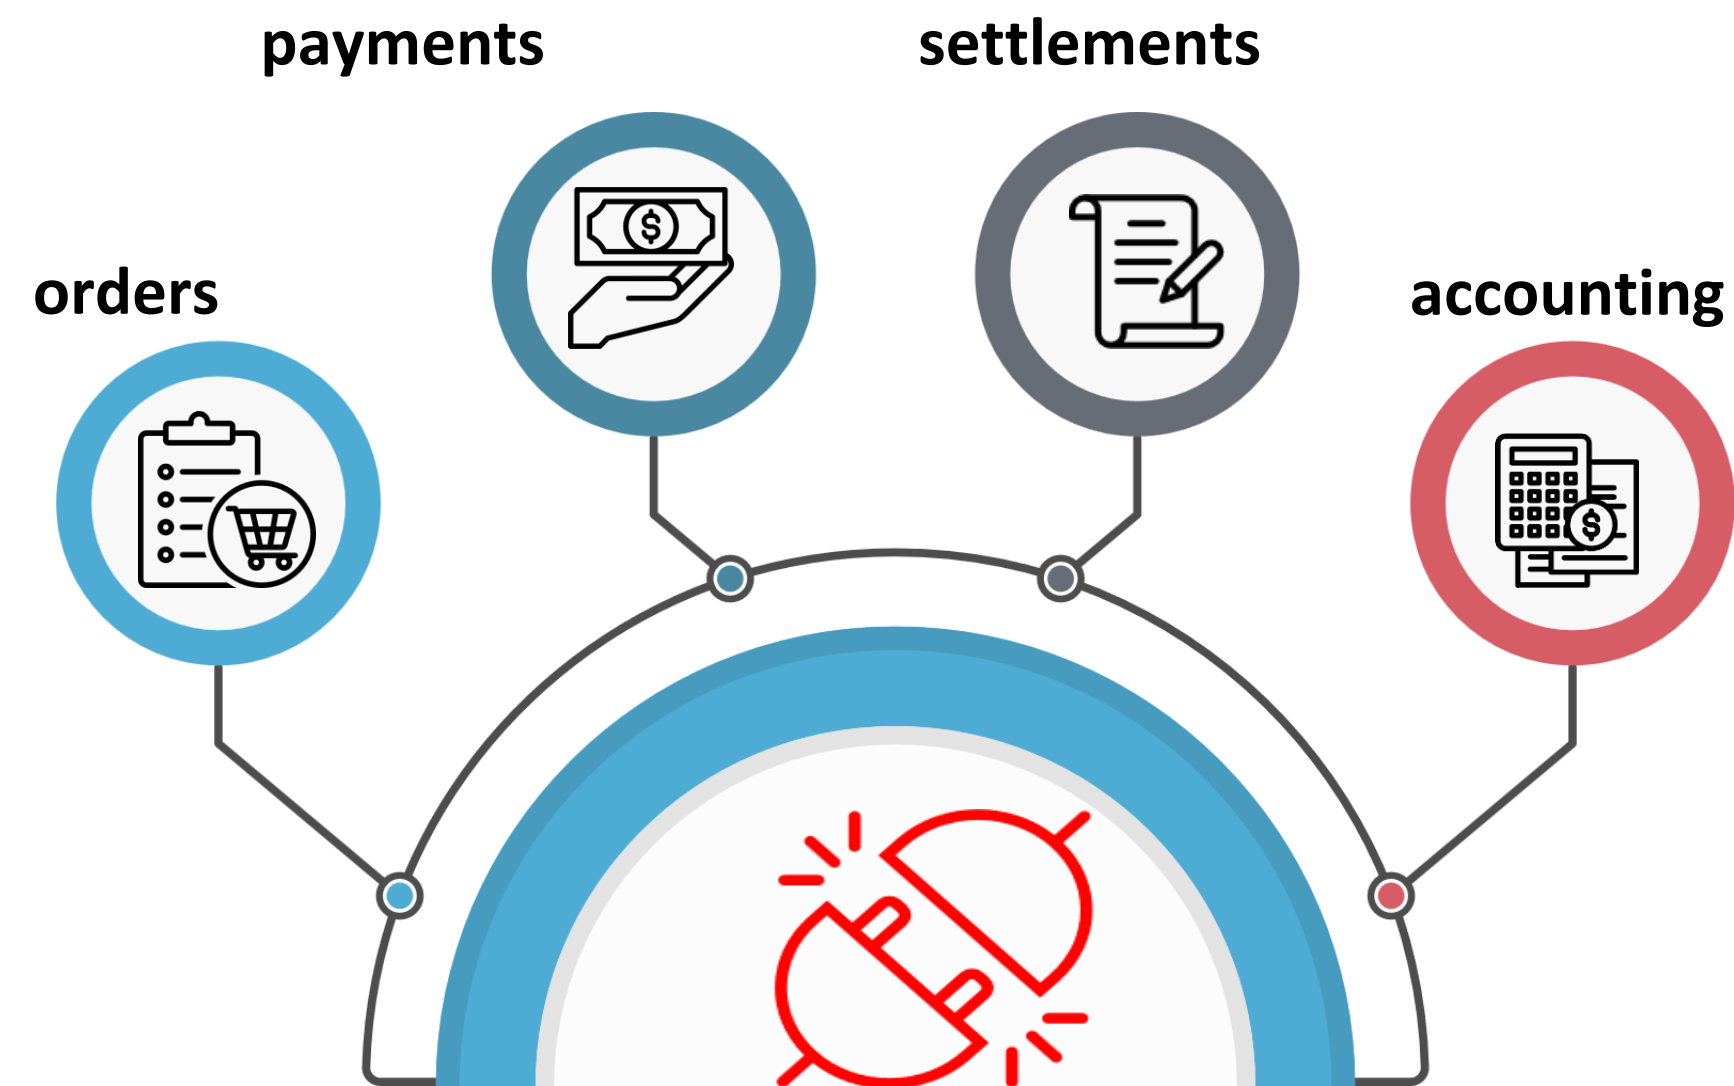

What we saw	The consequences 
Complex and disconnected Tech Stack with high transaction volumes	Repetitive, error-prone manual work
Invoices not recorded on individual levels	Painful month-end and year-end closes with tedious audits
Backend system with no matching logic	Inability to continuously reconcile order-payment-accounting data
Multiple disconnected PSPs	Unnoticed revenue loss due to lack of financial oversight

The cause for this problem is:

That a backend system is never designed
With **Finance** in mind

So what do all of these issues have in common?

A lack of financial control and streamlined reconciliation!

The trap of reconciliation is that everybody thinks:

“How hard can it be?”

And they step into a rabbit hole that simply doesn't end....

So...

how did recharge.com
overcome this to
continue growing and
developing a solid
backbone?

Actuals has developed a winning solution
for reconciliation and financial control

4 Steps to Full Reconciliation

① Orders vs Payments

Match orders with payments and understand revenue impact on a daily basis.

② Payments vs Settlements

Continuously verify that payments, refunds, and chargebacks are in line with your settlement data.

③ Settlements vs Accounting

Match settlements with records in the accounting system. Get a grip on suspense accounts.

④ Orders vs Accounting

Match orders with accounting data. Conclude that all orders are correctly recorded as revenue.

Implement solutions in any order!

Follow your money

Klarna. adyen

payments

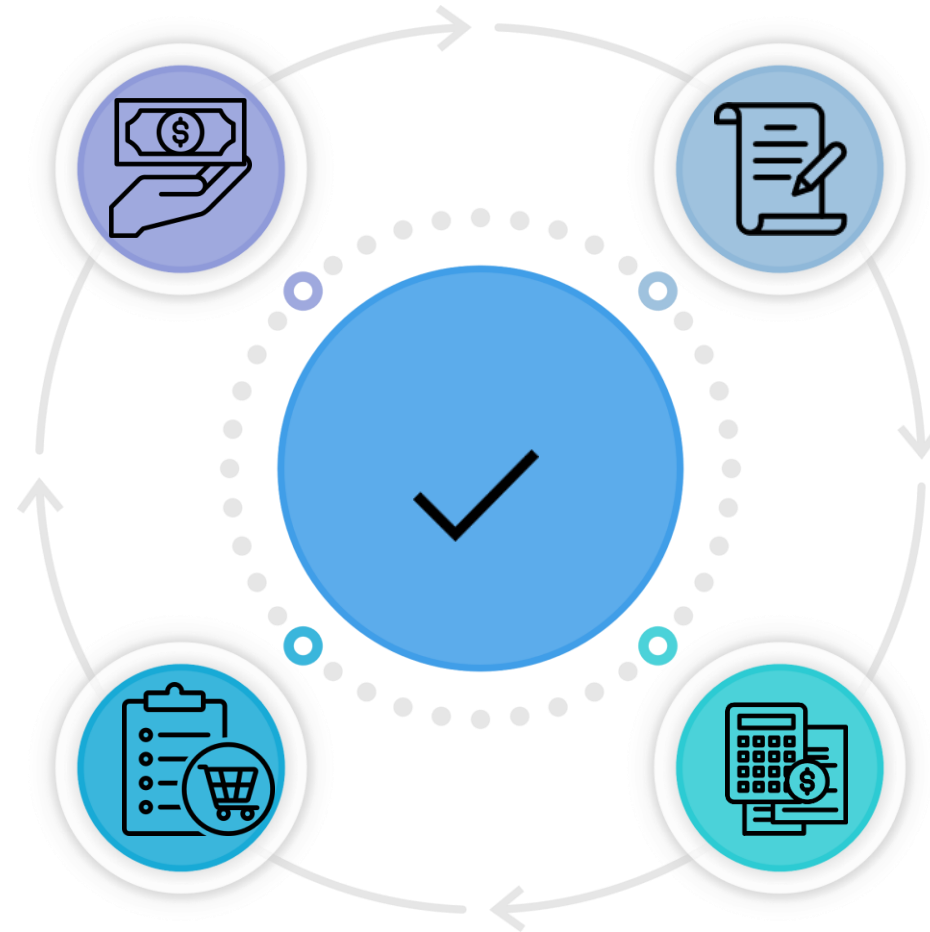

€ 100

orderId: 12345

orders

€ 100

orderId: 12345

Klarna. adyen

settlements

orderId: 12345

€ 100

-/- € 3 (PSP costs, FX changes, etc.)

€ 97

accounting

orderId: 12345

Conclude that:

- Orders can be matched with a payment
- Every payment has been settled
- Data is matched with accounting
- Costs are in line with expectations

Settled
€ 97

PSP costs € 1
FX results € 1
Other € 1

Using Actuals, means:

- Less manual work, more valuable time
- Faster month-end and year-end closes
- Relaxed and happier team
- Accurate revenue statistics and other insights such as PSP costs
- Spot revenue, refund and chargeback leakage
- And more!

The end result is:

A reliable **financial twin** of the backend that is in balance

Used by brands across the world that want to **continuously** trust their numbers

What they say about us:

“We've detected anomalies with transactions being invoiced multiple times ... or transactions not being claimed at all by our suppliers. With Actuals, we started to take out the anomalies that were hurting us most.” **Patrick Roozeman, CEO**

MultiTankcard.

“We will be able to reduce manual work by 8-10 hours per week...” **Niclas Franke, Head of Finance**

Homelike

“We have a tool to be in control and that I am close on the ball...” **Freddy Dijkman, CFO**
